

IN THE CLAIMS:

1-3. (Cancelled)

4. (Previously presented): An information processing method in an information processing system having an information terminal support server which supports an information terminal connected to a content server and loaded with a client program, the method comprising the steps of:

- (a) receiving, at the information terminal support server, a message sent from the content server responding to a request from the information terminal, wherein the message includes content;
- (b) determining whether or not said message agrees with a predetermined condition;
- (c) editing said message to insert a command in association with the content for the client program if said message agrees with said predetermined condition, wherein the command is executable at the information terminal to prohibit a behavior of the client program with respect to the content; and
- (d) sending said message in edited form to the information terminal.

5-7. (Cancelled)

8. (Previously presented): An information terminal support server which supports an information terminal connected to a content server and loaded with a client program, the information terminal support server comprising:

- (a) a message checker for determining whether or not a message sent from a content server in response to a request from the information terminal agrees with a predetermined condition, wherein the message includes content; and
- (b) a message editor, editing said message to insert a command in association with the content instructing the client program if said message agrees with said predetermined condition, wherein the command is executable at the information terminal to prohibit a behavior of the client program with respect to the content.

9-12. (Cancelled)

13. (Previously presented): A computer program product recorded on computer readable medium for storing an information processing program executed within a system having an information terminal support server which supports an information terminal connected to a content server and loaded with a client program, the program product comprising:

(a) computer readable means for instructing the information terminal support server to receive a message sent from the content server in response to a request from the information terminal support server, wherein the message includes content;

(b) computer readable means for instructing the information terminal support server to determine whether or not said message agrees with a predetermined condition;

(c) computer readable means for instructing the information terminal support server to edit said message to insert a command in association with the content providing instructions to said client program if said message agrees with said predetermined condition, wherein the command is executable at the information terminal to prohibit a behavior of the client program with respect to the content; and

(d) computer readable means for instructing the information terminal support to send said message in edited form to the information terminal support server.

14. (Previously presented): The information processing method of claim 4, wherein the content is a specified field and wherein the behavior is displaying the specified field.

15. (Previously presented): The information processing method of claim 4, wherein the content is a form and wherein the behavior is alteration of the form.

16. (Previously presented): The information processing method of claim 4, wherein the content is a form and wherein the behavior is submission of the form.

17. (Previously presented): The information terminal support server of claim 8, further comprising a message sender that sends the message in edited form to the information terminal.

18. (Previously presented): The information terminal support server of claim 8, wherein the content is a specified field and wherein the behavior is displaying the specified field.

19. (Previously presented): The information terminal support server of claim 8, wherein the content is a form and wherein the behavior is alteration of the form.

20. (Previously presented): The information terminal support server of claim 8, wherein the content is a form and wherein the behavior is submission of the form.

21. (Previously presented): The computer program product recorded on computer readable medium of claim 13, wherein the content is a specified field and wherein the behavior is displaying the specified field.

22. (Previously presented): The computer program product recorded on computer readable medium of claim 13, wherein the content is a form and wherein the behavior is alteration of the form.

23. (Previously presented): The computer program product recorded on computer readable medium of claim 13, wherein the content is a form and wherein the behavior is submission of the form.
